

Growing up together...

Field bean (*Vicia faba* L.)

VESUVIO

A mid-late, rust-resistant, dark-grain bean for animal feed, greening, intercrop mixtures

- **Rustic and productive**
 - Yield potential – 2.5-3.5 t/ha
 - As cover/catch crop can provide abundant biomass
 - Fixing N, improving soil structure
- **Resistant to lodging**
 - 10 %, but due to the small height of the plants, it does not affect the yield much

- **Resistance to diseases**
 - Tolerant to bean rust
- **Black small seed**
 - TSW – 350-370 g
- **High protein content**
 - 27.5-28.5%
- **Suitable for animal feed, greening, intercrop mixtures**
 - Can be favourably preserved by ensiling, especially with a grass (ex. oat or barley)

Recommended sowing rate:

27-29 plants/m², or 100 kg/ha

Recommended sowing rate as cover/catch crop:

36-38 plants/m², or 130 kg/ha

Field bean (*Vicia faba* L.)

NANAUX

A mid-late, small-grain bean for intercropping/catch crops

- **Small seeds, great benefit**
 - The smallest TGW (+/- 250 g)
 - TGW lower than 50 % of standard varieties
- **Resistance to diseases**
 - Very good resistance to Anthracnose
- **High protein content**
 - 22 %

- **Suitability**
 - In intercropping
 - Mixtures of species
 - As a companion plant to rape
 - Sowing under cover and other uses
- **Improves soil fertility**
 - Biomass yield – 1.6-2.0 t/ha
 - Amount of accumulated nitrogen – 58-62 kg/ha
 - C/N ratio – 11.5-13.8

Recommended sowing rate:
50-60 plants/m², or 125-150 kg/ha

SPECIAL MIXTURE
with
small grain beans

Mixture TGS N fiks 6

Composition:

- 40 % Field bean (small grain)
- 15 % Fodder pea
- 15 % Bristle oat
- 10 % Narrow-leaved lupine
- 7 % Buckwheat
- 5 % Linseed
- 5 % Niger
- 3 % Sunflower

Recommended seed rate:
60-75 kg/ha
